Am't. Dated July 6, 2006  
Reply to Office Action of April 6, 2006

Attorney Docket No. 81751.0066  
Customer No. 26021

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently amended): A semiconductor device comprising:
  - a die pad;
  - a semiconductor chip having an electrode and bonded to the die pad;
  - an inner lead having a an sloping end section that is sloping upward and outward from the semiconductor chip, wherein a surface of the die pad which the semiconductor chip is bonded faces upward;
  - a wire electrically connecting the inner lead to the electrode;
  - a sealing section sealing the inner lead, the semiconductor chip, and the wire; and
  - an outer lead extending outward from the sealing section;
  - wherein the wire is bonded to the sloping end section of the inner lead, and
  - wherein a portion of the inner lead is higher than the semiconductor chip.
- 2-4. (Cancelled).
5. (Currently amended): The semiconductor device as defined in claim 1, wherein the inner lead further has ~~a second sloping section~~ a portion sloping downward and outward from a higher end of the end-sloping section that is sloping.
6. (Original): The semiconductor device as defined in claim 1, wherein the inner lead further has a portion extending in a horizontal direction and connected to the outer lead.
7. (Previously Presented): The semiconductor device as defined in claim 1,

Customer No. 26021

wherein a bonding position between the wire and the inner lead is lower than the position of the electrode.

8. (Cancelled).

9. (Original): The semiconductor device as defined in claim 1, wherein a surface of the die pad opposite to the semiconductor chip is exposed from the sealing section.

10. (Original): A circuit board on which the semiconductor device as defined in claim 1 is mounted.

11. (Original): An electronic instrument comprising the semiconductor device as defined in claim 1.

12-20. (Cancelled).

21. (Currently amended): A semiconductor device comprising:

an inner lead having a ~~an~~first end sloping section ~~that is sloping~~ upward and outward from the semiconductor chip, the inner lead having a ~~second sloping section~~ portion sloping downward and outward from a higher end of the ~~first end sloping~~ section, wherein a surface of the die pad which the semiconductor chip is bonded faces upward;

a die pad;

a semiconductor chip having an electrode and bonded to the die pad;

a wire electrically connecting the inner lead to the electrode;

a sealing section sealing the inner lead, the semiconductor chip, and the wire; and

an outer lead extending outward from the sealing section, and

wherein a portion of the inner lead is higher than the semiconductor chip.
